

Anti-Corruption Policy

Corruption and bribery, is against law and against NIPUNN Engineering values. We will work against corrupt practices by constantly focusing on anti-corruption measures that we can take as a group.

NIPUNN Core values are the foundation on which our company conducts business. They guide the way we carry out our job. Applying these values in every aspect of the work allows us to be proud of our work, including our ability to maintain high ethical standard in situations that can challenge those standards. Our core values of Uprightness means that good business is clean business and that bribery cannot be part of our business.

Bribery is illegal worldwide and NIPUNN is committed to its strict compliance. We apply relevant international rules and standards dealing with facilitation payment and are committed to the eventual elimination of such payments.

No group employee at any level may offer, promise, authorize or give anything of value to any public official in any country, or to any business partner, in order to gain any improper business advantages of any kind. Nor may any employee solicit or accept any form of bribe from any person.

We will implement and enforce this policy rigorously. This is responsibility for everyone in the company and the employees who fail to comply with this policy, NIPUNN anti-corruption guidelines and/or relevant laws will face internal disciplines- and possible prosecution.

Corruption is a problem that companies face globally and countering it affectively requires not only that we cooperate within our company but also that we increasingly cooperate, with governments, NGO's, business partners and business organizations, and others working against corruption globally
